

Bio-Nutrition International

Myxin-Bond

(Feed Grade)

Physical Characteristics

Color: light gray

Taste: clay

Texture: dust-free, uniform powder

Packaging

20 kg poly-lined paper bag

Bulk tote bags

Product Description

Myxin-Bond is a feed conditioner and binder of mycotoxins that can cause production and health problems. Myxin-Bond includes two unique absorption materials: nano-montmorillonite, and purified hydrate sodium calcium aluminosilicate (HSCAS). Specially formulated to absorb and retain major mycotoxins, Myxin-Bond is a comprehensive treatment for animal feed. Myxin-Bond binds strongly with mycotoxins and detoxifies the animal body. Its ability to absorb zearalenone, protects reproductive performance and improves egg-laying capacity in poultry. Myxin-Bond is stable and reliable and has no adverse effect on feed. Myxin-Bond does not bind with nutrients, cannot be absorbed by the intestinal tract, and has no side effects.

Ingredient Composition

Nano-montmorillonite, and purified hydrate sodium calcium aluminosilicate (HSCAS)
